Physio, Speech Language, Music,
Occupational Therapists & Dietitians

World Oral Health Day 20 March

Here at Therapy Professionals we have provided therapy services to many people of all ages with disabilities since 1985. In our experience sometimes those with disabilities have poor oral care especially those without teeth or those who are tube fed.

Oral care is important for everyone. Follow this link to find more about why those without teeth or those who are tube fed need oral care and how to care for them.
